DIY open questions

- How important is DIY to people?
- Is it a moral, aesthetic, or practical choice?
- How many people places themselves in the category?
- What portion of their life is DIY?
- Is it something that appeals to young people more or less?
- Is DIY a durable phenomenon -- will it last?
- Is it affected by the economy?
- Concerns about climate change?
- How is DIY incorporated into an individual’s work life?
- Is it a value/practice they'd like to pass on to children?

DIY

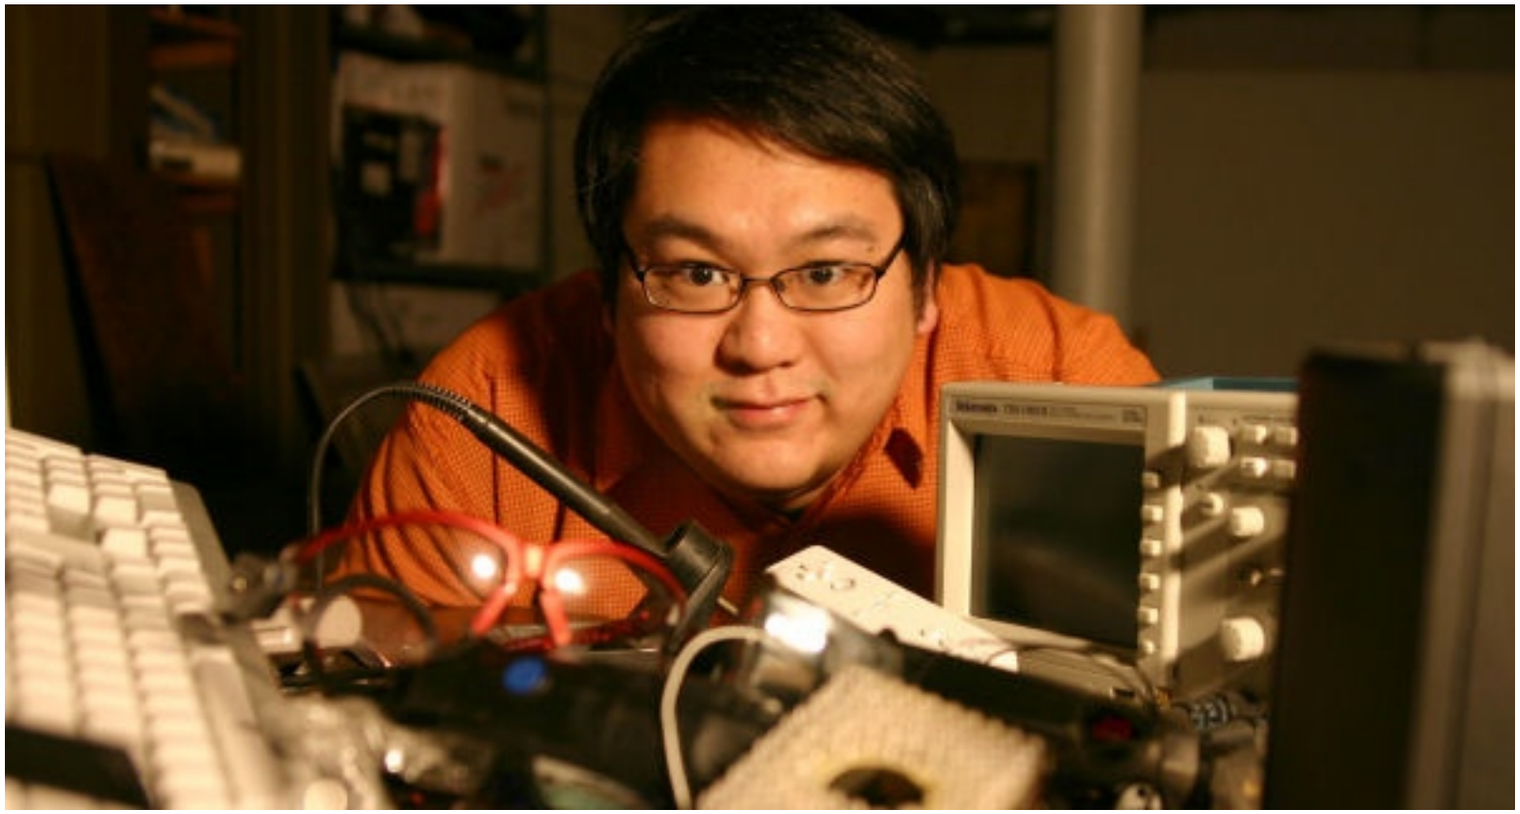
Chronicle / Penni Gladstone

- Build rather than design
- Materials must come pre-broken
- Rubbish is the root of virtuosity
- Celebrate incomplete designs
- Allow for non-rivalrious use

- Embrace new materials - organic, decomposable, Hertzian, biological, molecular, food, soil ...

Every profession is a conspiracy against the laity

- George Bernard Shaw



UIST

+

DIY

our role is changing from “professional idealizer” and “problem solver” to ...

non-professional facilitator of new artifacts

we are not the sole gatekeepers but rather equal practitioners in a loose process where we encourage the flow of possibilities and modalities and are open to learning and surprise by others - especially from those outside of our community

The best way to make art is to intrigue and to be a bit seductive. You just say, here's this and this...you figure it out

- John Baldessari

Citizen Science

1. Engage people in doing Street Science that results in practical action

2. Motivate people to gather, analyze, share, and act upon information

3. Develop a device that is usable by lay people and produces **credible** information that can be understood by non-experts

4. Develop community software infrastructure to support communication and action

Citizen Science

Improve the science literacy of everyday citizens through active participation in basic scientific data collection and use of scientific principles

Citizen Science

Provide professional scientists and stakeholders with access to richer, finer grain data sets for modeling, analyzing, and advancing both fundamental and applied knowledge regarding people and the ecosystem

Citizen Science

Develop new usage models and user experiences for the mobile phone as a tool for promoting transparency and enabling grassroots participation in local community and civic government policy making

Citizen Science

Create greater public awareness and understanding of the relationships between humans and the natural environment particularly with regard to sustainability and environmental issues

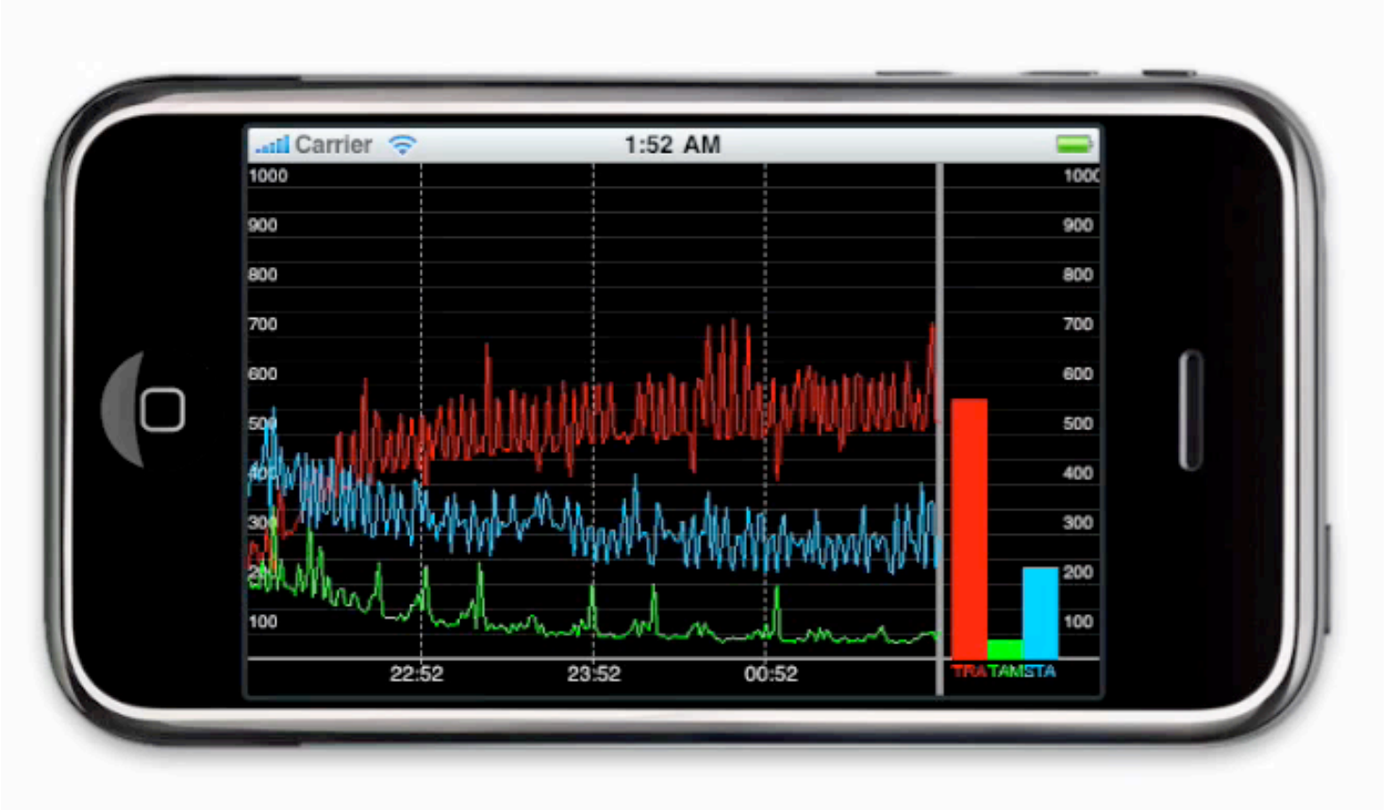
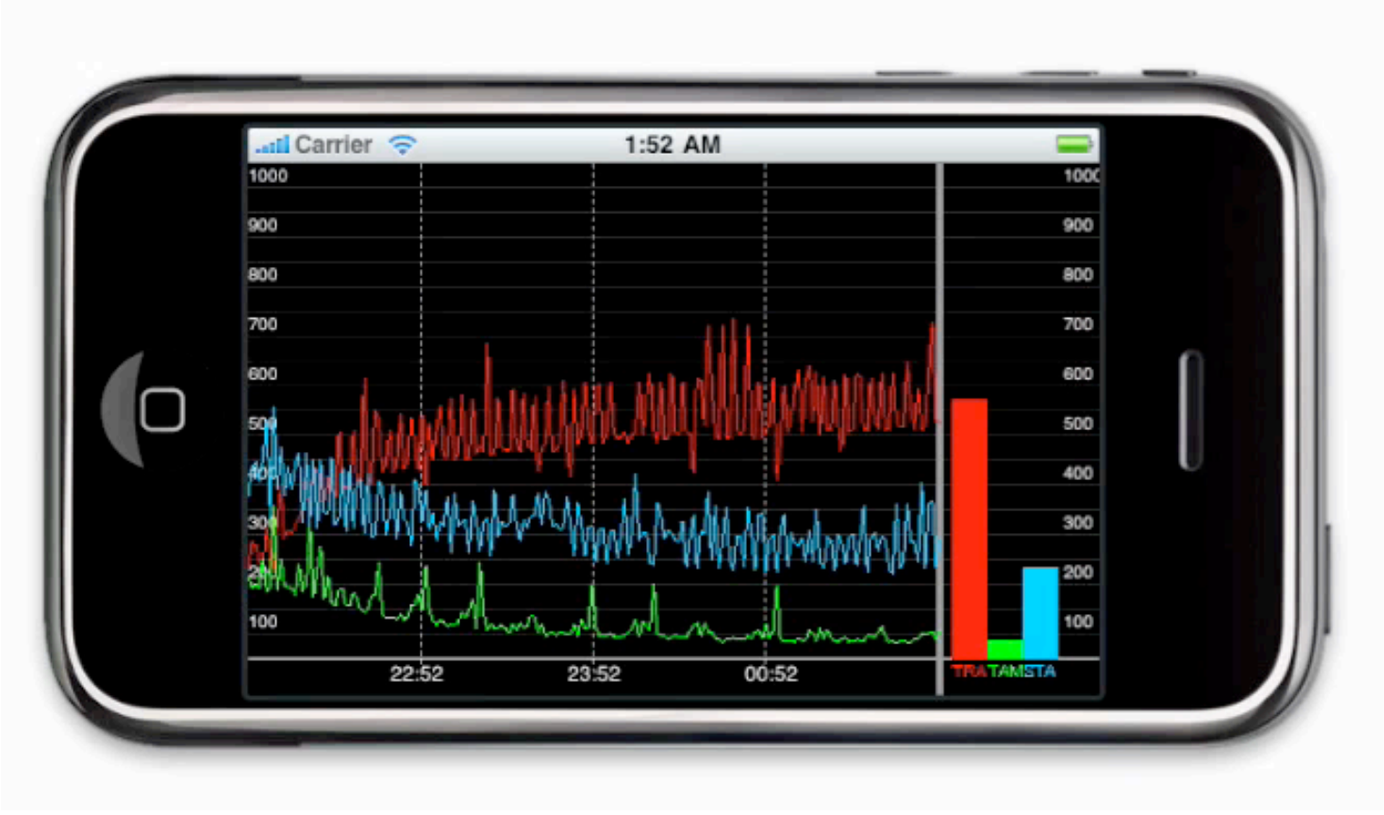
TRATANISTA



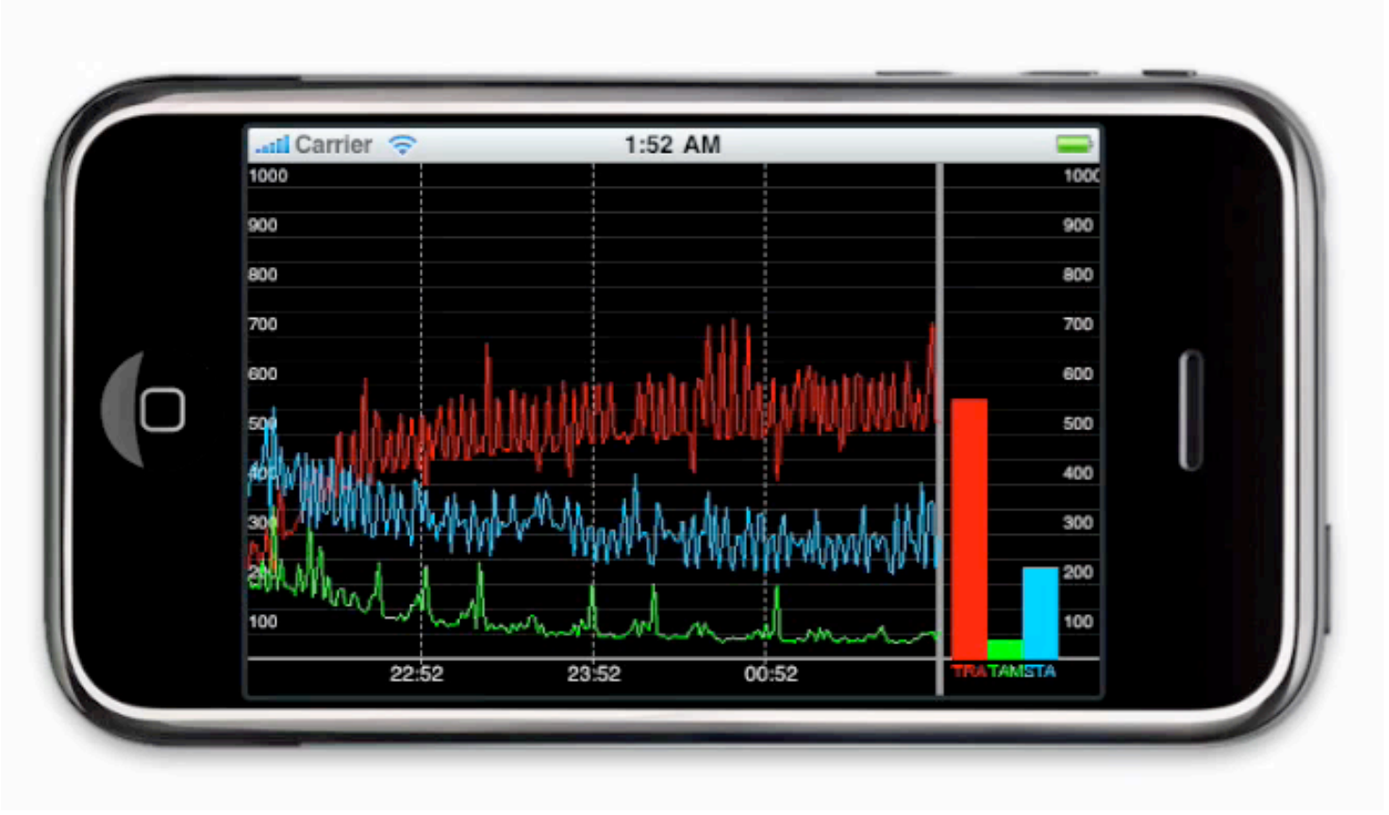
I have smoked more than 40 years. I have no reason to quit.



I have smoked more than 40 years. I have no reason to quit.

It was different from knowing how bad it is to seeing how bad it is.

Sometimes you need a smack in the face. It shoots up when I light a cigarette.



I have smoked more than 40 years. I have no reason to quit.

It was different from knowing how bad it is to seeing how bad it is. Sometimes you need a smack in the face. It shoots up when I light a cigarette.

It was affecting my denial over smoking. It is too predominant. Nothing else made air worse than smoking, Cooking, vacuuming, lighting a fireplace...Nothing! My air quality is like ten times worse than others. I am not feeling comfortable anymore with smoking.

Making Sense of Sensors

sensor legibility

design for disassembly

designing for doubt

designing for activism

representation: good or evil?

neutral sensors

avoid creating culture of fear

The time for games has passed.

Now is the season for action

- Barack Obama
