

CITIZEN ENERGY

*Our future is what we build it to be
- Barack Obama*

ACTIVATING ENVIRONMENTS

FINAL CRITIQUES

THUR 3 DEC
9:00 AM - 12:00 PM
6501 GHC

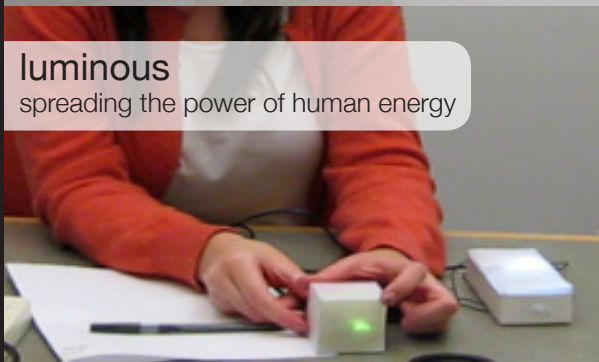

In citizen energy the public is conceived as active rather than passive stakeholders in our energy system evolution. Citizen energy is a counterpoint to the current social and psychological detachment of the public from today's existing large scale, centralized energy infrastructure.

Come join us to see your energy future as students from the HCI Activating Environments course present their third design vignette final projects outlining opportunities and design challenges for citizen energy including videos and live performances.
