

Tongs Redesign

Varnali Shah | Basic Interaction Design | Spring 09

Current Design

The clip keeps the tongs closed when they are not in use

Long line of people wait while you slide back the clip on tongs to open them

The clip slides down when you press middle part of tongs to pick up food

You fumble to release food on plate as the clip holds the tongs closed

Improved Design

Remove the cap from front and place it at the back

Hold tongs from the grip to take food in plate

When you are done using, replace the cap on top
