Smart Smoke Detector

"Those darn smoke alarms going off again! They're so loud and annoying! At one point, I remember a 2 a.m. charge down the stairs, screeching alarm in hand, and throwing the thing in the trash can outside!"

"I've to drag a ladder out everytime this thing triggers. I can never get them off without twisting and pulling or completely disassembling them!"

Sounds familiar? Do you stand there and wonder how you could possibly stop that super irritating noise?

Not any more. Here's a way to just wave your irritaion away -

The new smart kit detects the emergency level of the situation based on a smoke threshold.

If smoke is less than the threshold, the alarm is just loud enough to catch your attention. The frequency of the beeps is moderate and the indicator is amber in color.
The alarm can be reset using the gesture recognizer embedded in the kit.
All you have to do is stand directly underneath the ceiling-mounted kit and wave your hands across.

If the smoke is above the threshold, the alert sounds urgent and the indicator glows a bright red. The gesture recognition mechanism is turned off and the alarm can only be reset when the smoke subsides.

SMOKE ALARMS SAVE LIVES

PUT A FINGER ON IT!
