

Shower Radio Control

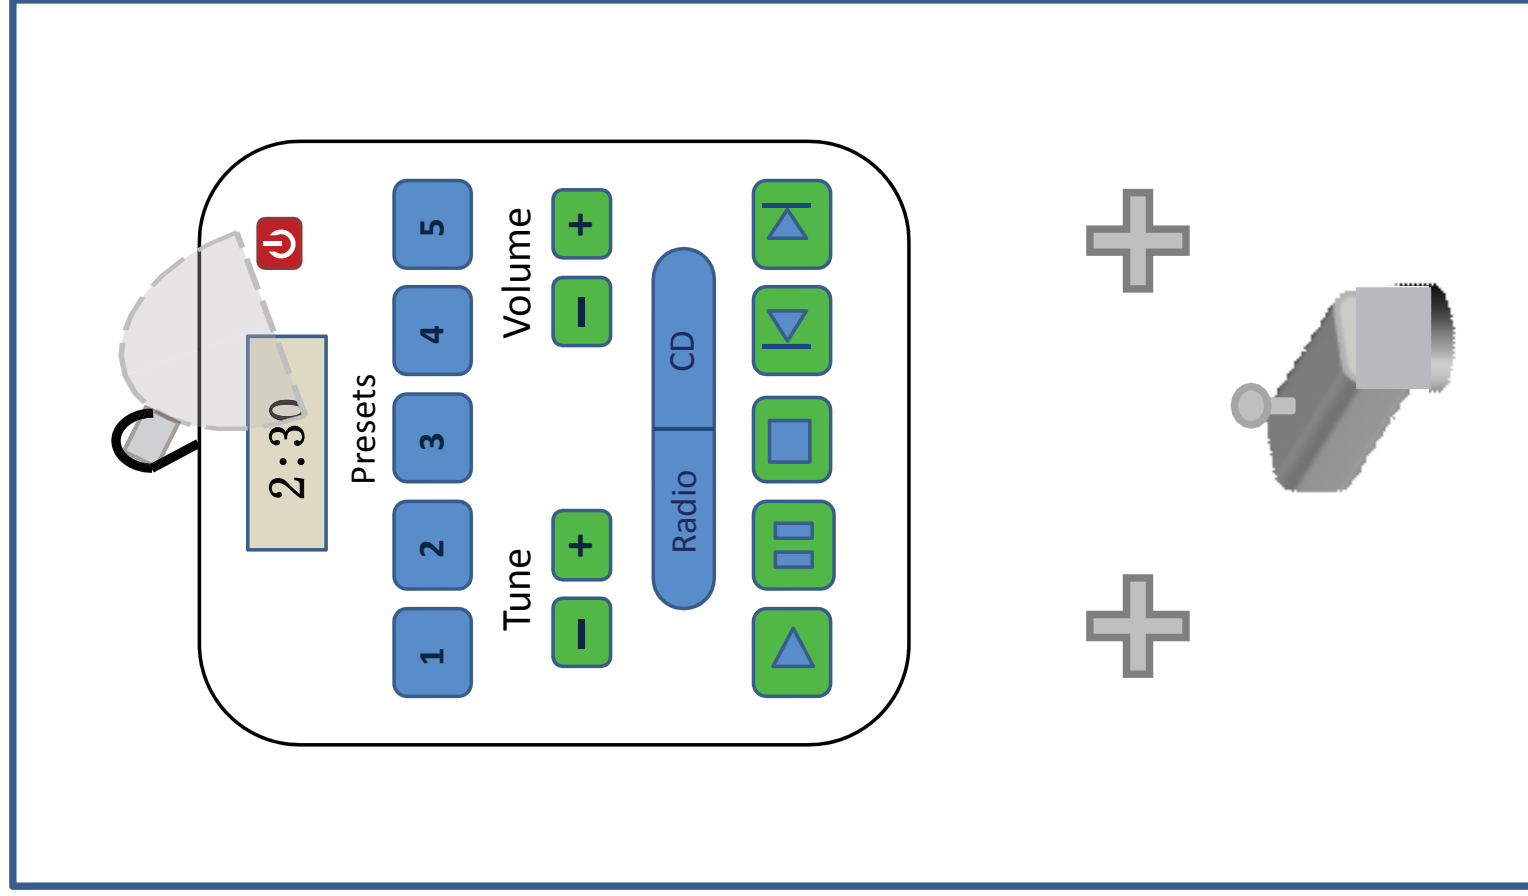

The Old

- Radio itself is too big to conveniently fit in shower
- Small buttons are difficult to read under the best conditions
- Arrangement and functions of the buttons are hard to decipher

The Inspiration

- Should have easy to use buttons
- Should not take up much space

The New

- Touch sensitive remote control can be hung from shower head with the radio placed in any desired location
- Hook and suction cups keep remote control fastened securely to shower wall
- Large, colorful buttons are easy to press under any circumstances
- Controls follow standards of most radios and CD players
- Only the basic controls need to be in the shower, advanced features can remain on the radio itself
