

Pulling Chain Redesign for Ceiling Light Fan

A1: Control design
Yuan Wang
MHCI@CMU

Problem

Two pulling chains are in the same height and shape, which makes it difficult to distinguish with each other and relate to different control functions.

Solution

1. Move the chain of fan control to the top, to make it closer to the fan.
2. Make the chain of fan control longer, because people usually only use chains to control fan.
3. Make the cords at the end of the chains distinguishable with the other.
